

MERCOIN V 1.3

WHITEPAPER

Last update: october 4 / 2017

Bitcoin is the Mother / Father currency of all currencies / digital currency. While it was BTC's own merit to attain that leadership that many doubted, it has also fallen into a bottleneck in its generation.

Its difficulty has grown so rapidly that only a few can be made of BTC. This goes against the principles of this criptomoneda in his Genesis. As many will know BTC was created to be decentralized but nowadays, groups of developers, well delimited by their ideals, dispute the power and control among other things, the blockchain.

MERCOIN (MRN)

Named in honor of MERCOSUR, it is a new altcoin that was designed to be used purely and exclusively in the Latin American region. This does not mean that transactions to the rest of the world are prevented, but rather that the region is the first to adopt it as an official criptomoneda. That's what it's all about. That he was born so that the citizens of the community have a sense of belonging in it. Since economic restraint and foreign exchange prohibitions often occur in Latin America, the MERCOIN team considered that a new crypto-currency, with a difficulty lower than that of Bitcoin, could be imposed efficiently. Needless to say, Latin American citizens, for the most part, do not have the resources or equipment of great power to undermine BTC or another already known coin of similar characteristics, but it does not feel the reason to establish itself with an altcoin.

main objective was to foster a common space that would generate commercial and investment opportunities through the competitive integration of national economies into the international market. As a result, it has established multiple agreements with countries or groups of countries, granting them, in some cases, Associated States - the situation of South American countries. They participate in activities and meetings of the bloc and have trade preferences with States Parties. MERCOSUR has also signed trade, political or cooperation agreements with a diverse number of nations and agencies on five continents. However, despite the fact that MERCOSUR claims to promote trade openly, many Spanish-speaking countries have fallen out of this type of agreement, nor do they maintain complementary economic ideals.

MERCOIN & Latin América/

MERCOIN and Latin America / MERCOSUR is an open and dynamic process. Since its inception, its

In this white paper, we detail the MERCOIN.org project. Its idealism, development and future projections. MRN is a cryptodivisa focused on privacy and based on **Script**. Details of the initial currency offer (ICO) will be explained as well as future developments. MERCOIN is open source

Note:

Risks involved in the investment

We would like to suggest that you consider some things before investing in our, or any other, initial currency offer (ICOs):

No investment is considered without a minimum amount of risk:

Leaving money in risk-free investments like high-yield savings accounts is not investing at all.

By taking very little risk, keeping most of your wealth in a savings account virtually guarantees that you will lose long-term purchasing power due to the increased costs of goods that you can buy with that money.

Market risk

A fall or fall in the market could crush the performance of this investment, even if the quality of your investment remains the same.

Default Risk

The risk of default is related to the quality of the underlying investment, and is most evident when investing in a single company, through stocks or bonds.

Inflation risk

However, there is a possibility that, for a given time, the measure of inflation, or for a more accurate description in this case, the increase in the cost of goods, may be significantly more than usual.

The first golden rule of investment you should always follow: Never invest money that you can not afford to lose. Investing is not saving.

Key features of MERCOIN /

Script Algorithm

MERCOIN uses the mining algorithm Scrypt, which is superior in concepts of compatibility and security that have a widely disseminated algorithm, has full support. These two elements have been fundamental in selecting what would be the definitive algorithm for MERCOIN, since we always look for the best design and the most efficient sea for our community.

- Name: MERCOIN
- Ticker : MRN
- Algorithm: Scrypt
- Type: Pow / PoS
- Letter: M
- Máx. supply: 100.000.000 (Max. Supply)
- Premine: 20% (10% stake 10% ICO)
- Block reward POW: 100
- Port RCP: 23880
- Port P2P: 23879
- Last block POW: 100000
- PoS: 5% year
- Minimal time for stake: 8 hs

The three versions of MERCOIN

MERCOIN was held on three occasions:

The first was based on Cryptonote Cryptonote. The same pleased us with regard to its security and anonymity in transactions, also to allow the mining CPU - GPU, nevertheless it is an algorithm still very incompatible or little accepted by many of the exchanges, something that plays against it.

Then we try to stabilize MERCOIN with the algorithm NIST5. An algorithm highly efficient for its thermal performance, but being little spread, only very few criptomonedas have used it. Therefore, we decided to establish in the source code the scrypt algorithm, which despite generating temperature in the mining process, is highly compatible, very widespread and therefore has a lot of support. It also allows both mining with small equipment and equipment strictly designed for this process called ASICs.

The MERCOIN.org team listed the main shortcomings of the current economic systems in our region and below are indicated as MRN can help to solve these financial problems.

Problems/

- Financial crisis in the different Spanish-speaking nations
- Restriction and currency prohibition policies
- Economic tax measures
- Loss of saving capacity
- Application of spill theory to communities

Solution/

- Implementation of an independent government control currency or financial entity
- Regulated by your own community
- Impossible to falsify for its great algorithm development
- Immediate exchange market against other crypto-currencies
- Generation of savings without restriction
- Issuance by the community itself generating equity
- Promotes free trade with the nations of the region
- Technological development and application of innovations in software without relying on corporations

Policy of Issuance of the currency /

A maximum emission (Max. Supply) of 100,000,000 MRN units is established (one hundred million units)

These units will be in their 20% (20 M of MRN) pre-set of which:

10 M of MRN will be sold in the ICO (initial cryptocurrency offering) - Initial offer of Criptomonedas -

The remaining 10 MRNs will be reserved as shares of the currency.

Policy of destination of funds of the ICO /

The final collection in the ICO period (between August 20, 2017 and September 30 of the same year) will be allocated to:

- **Translations**
- **Platform support**
- **Broadcast campaigns**
- **Development of new technologies**
- **Integration of crypto-virus to commercial media**

During the sale of ICO the accepted payment currencies will be:

- BitCoin
- Ethereum
- Ethereum Classic
- DASH
- Monero
- LiteCoin
- Ripple
- Credit card payments through virtual platforms.

Projection of the development of MERCOIN /

1.-The development team of MERCOIN.org along with those that are being integrated, will have as objective:

2.-Establish MERCOIN as a regional currency, being found in the main virtual tourism platforms, shopping places, gastronomic shops and other types

3.- Finalize with the development of the physical MERCOIN (MRN-F) which works through a software allowing to print both paper and 3D (Currency), the balance that the user wants, contemplating security and developing an encryption which prevents clones and / or duplicates.

4.-Develop innovative payment platforms and self-managed practices, including the MRN card and MRN ring. Both will work with NFC technology (by proximity) and will be self-managed by the user. That is to say, each individual will be able to carry the load of the balance that you want in your card without intermediaries.

5.-Develop mining equipment with low cost and low power hardware with great efficiency and performance, based on Udoo x86 starter and Ultra cards.

6.-Financing technological developments that contribute to the good of the community and the environment.

Although MERCOIN (MRN) is a cryptomonedas, it was created with the fundamental premise of generating a double benefit to the community. The first is to maintain the sustainability and saving capacity of the people and the second, to break the technological gap, taking advantage of the excellence of the HR of the region to develop technologies that improve the conditions of the population. The following is how the MERCOIN.org team achieves the above objectives:

MERCOIN will prevail in the region on the basis of dissemination, active collaboration of community participants (mining, ambassadors, conferences and other dissemination).

Conference events will be organized in each of the countries that make up Latin America over the next two years.

It will conclude with the development of the physical format and role of MERCOIN or otherwise called MRNF.

The same will allow transfer balance as well as conventional money for those who prefer.

MERCOIN will be established in means of payment of the region that allow to pay for daily services in an easy and fast way, both online and in the locations that so provide. The steps for the incorporation of MERCOIN into ATMs of criptomonedas will be completed

Low-cost mining equipment will be developed as efficiently as possible. At the moment they are being tested with plates Udoo Ultra and x86, which has a small size but an interesting and useful power.

A link was established with the team of MIRAI3D of Argentina, for the technological development oriented to Health; which includes 3D biomodels, surgical simulations, among others. Also the Wemakeit team of Chile will provide software oriented to the mentioned branch.
